COCOM Doc. (68) 433

Coordinating CommitteeMemorandum by the German DelegationExport of centralit I in scales to Hungary

The German authorities have received an application to license the export to Hungary of

30.000 kgs of centralit I in scales
covered by item 8 (b) of the IML
total value: 33.750,- \$.

This material has been ordered by the Hungarian Governmental Foreign Trade Agency "CHEMOLIMPEX" in Budapest which expressly confirmed that the centralit I is destined for civilian purposes in Hungarian territory, namely for the production of industrial explosives and of smokeless powder for hunting purposes.

End-user is the firm Nitrokémia in Füzfö.

Centralit is a symmetrical diphenyldiethyl-urea which is used as gelatinizing agent and stabilizer. By adding small quantities of centralit I the production of explosives is simplified, the powder at the same time being rendered less brittle.

The German Delegation submit this request under the provisions of the general exceptions procedure (COCOM Doc. REG (66)1, chapter A) and would be grateful if views of Member Governments could be received as soon as possible.
